

## IN THE SPECIFICATION

*Please replace paragraph [0022] as originally filed (paragraph [0024] in now published U.S. Patent Application Publication No. US 2005/0071666 A1) with the following paragraph:*

[0022] While authorized location list **222** has been ~~[[describe]]~~ described above as relating to GPS signals, alternatively, list **222** may contain alternative coordinate listings supplied to location service **208**, including a coordinate of an enterprise defined system. That is, an enterprise may have a coordinate location identifier supplied by a local transmission system. As shown in **Figure 4**, an enterprise may have a location identifying system uniquely identifying each location within the enterprise's campus. For example, room **402** may be a laboratory in which a computer **410** is required to be located in order to run an application that is proprietary to the enterprise and/or operates on secret data revealed to and by the proprietary application. A local transmitter **406**, operated by the enterprise, transmits a unique signal **408**, preferably a digital signal, encrypted or not, that provides a unique identifier for room **402**.
